Living in Florida, hurricanes are just a part of life. You can't stop them from coming, but you can protect your home when extreme weather strikes.

An Englert Standing Seam Metal Roof is an integral part of that protection. Our roof is built to withstand the weather in hurricane zones and has been laboratory-tested to meet Florida's extreme wind and pressure performance standards.

Some roofing materials, such as asphalt shingles, can't withstand hurricane-force winds. On the other hand, metal roofs can withstand winds of up to 165 mph. It's the right choice to provide the safety and security needed in a coastal community. Englert manufactures High-Velocity Hurricane Zone-approved metal roofing to withstand hurricane-force winds*.

The time is now to protect your home against water damage and expensive losses. Contact us today!

***HVHZ rating on select models.**
