Since its founding in 1966, Englert has evolved into one of the pre-eminent forces in metal roofing. Englert offers architects and builders innovative, and ever more advanced solutions that uniquely combine aesthetics and performance.

Englert is widely recognized as the leader in jobsite rollforming, where materials are custom cut and fit on site, to provide a seamless, high-quality product, with far less waste, and at lower costs than pre-formed panels.

Englert Metal Shingles are one of the more exciting innovations in the roofing industry today. They offer a perfect choice for light commercial and residential applications. Finally, an affordable, easily installed metal roof alternative.

At first glance it appears that the only metal used on the project is over the roof canopies (standing seam - blue panels). When you take a closer look you see that flush metal panels are used on the walls and soffits of the canopies, as well as throughout the building as architectural accents. Notice that the copings on the building match the roof panels, to give a finished matching look.
