

ABOUT CLIP SPACING...

This guide is intended to provide you with sufficient information so that you may choose the appropriate clip for our metal roof system. We have purposely omitted any reference to clip spacing as this element of roof design varies by panel width, panel material, seam style, substrate your fastening to, and building codes in the area your job is located. For more specific guidance on appropriate clip spacing for your particular job contact Englert for assistance at 1-800-610-1975.

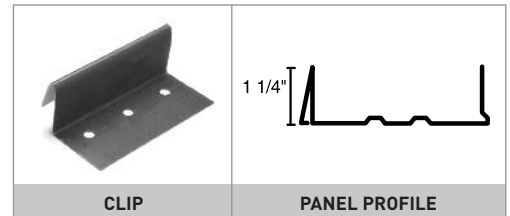

SERIES 1000
