

RainPro Rain Defender

Internal Downspout Filter & Clean Out System

Rain Defender installs directly into the downspout to intercept leaves and roof debris before they clog underground drains or extensions. An internal angled metal screen maintains water flow, while a flush-mounted exterior clean out door allows fast, toolless maintenance.

HOW IT WORKS

- Debris enters the downspout
- Angled internal metal screen captures debris
- Water continues downstream
- Slide up clean out door provides quick access

KEY FEATURES

- Angled perforated metal screen prevents packing and blockages
- Flush-mounted exterior clean out door
- Internal installation protects from UV and impact
- Clean, professional appearance homeowners accept immediately
- Creates a visible service and inspection point

WHY CONTRACTORS CHOOSE IT

- Reduces underground drain clogs
- Helps prevent foundation water backup
- Cuts service calls and troubleshooting time
- Simple, premium upsell that adds real value

Install clean. Service fast. Prevent clogs.
